

A. Traditional: higher-echelon staff

Tactical unit — urgent question

$T + 0 \text{ min}$

Report up chain of command

$T + 2\text{--}5 \text{ min}$

**Higher staff analysis
(if staff available)**

$T + 8\text{--}20 \text{ min (or unavailable)}$

Wait for decision / order

$T + 15\text{--}40 \text{ min}$

Action begins

elapsed: 20–60+ min

Assumes staff available, radio link, no concurrent demands

B. VWA: virtual staff (prototype-based)

Commander inputs Vibe

$T + 0 \text{ s}$

Orchestrator: SIR parsing + activation

$T + 2\text{--}5 \text{ s}$

**Agent analysis (J-series, JAG, AEA, ATOA, ...)
concurrent where inputs are independent**

$T + 15\text{--}30 \text{ s (prototype, 4 agents: 15–23 s)}$

IACB: veto check + audit log

$T + 30\text{--}45 \text{ s}$

Commander decides

elapsed: under 60 s

Assumes local compute at the unit; no higher-echelon link required

All timings are illustrative author estimates, not measurements (except the 15–23 s prototype mean).
